

Senior PHP Engineer

Backend Development, Scalable Web Platforms & Modern PHP Architecture

-  Remote / Hybrid / Onsite
 -  Full-Time or Part-Time
 -  The Copia Group, LLC
 -  Senior Level
-

About The Copia Group

The Copia Group is an investment management firm supporting innovative companies across fintech, digital infrastructure, AI, and emerging technology sectors.

Through strategic investments and partnerships, we help accelerate the growth of technology-driven businesses building scalable software platforms, digital products, and enterprise solutions. Our portfolio companies leverage modern backend technologies to power secure, reliable, and high-performing applications across multiple industries.

We are seeking an experienced **Senior PHP Engineer** to design, develop, and maintain robust backend systems that support mission-critical applications and deliver exceptional customer experiences.

The Opportunity

As a Senior PHP Engineer, you will play a key role in building scalable web platforms and backend services using modern PHP frameworks and cloud technologies. You will collaborate with Product Managers, Frontend Engineers, DevOps teams, and Designers to deliver high-quality software solutions that meet evolving business needs.

This role offers significant technical ownership, opportunities to influence architecture decisions, and the chance to mentor engineers while helping shape engineering best practices across the organization.

What You'll Do

Backend Development

- Design, develop, and maintain scalable backend applications using modern PHP frameworks
- Build secure RESTful APIs and microservices that support web and mobile platforms
- Develop reusable, maintainable, and well-tested code following industry best practices
- Optimize application performance, database interactions, and system reliability
- Troubleshoot and resolve complex technical issues across production environments

Architecture & Engineering Excellence

- Contribute to backend architecture and technical design decisions
- Implement scalable system designs and modern software development practices
- Conduct code reviews and promote engineering quality standards
- Improve testing, deployment, and development workflows
- Ensure security, maintainability, and operational excellence across applications

Database & Platform Engineering

- Design and optimize relational database schemas and queries
- Build integrations with third-party APIs, payment providers, and enterprise systems
- Support cloud-native deployments and infrastructure automation initiatives
- Implement caching, queue processing, and asynchronous workflows
- Enhance application observability, logging, and monitoring capabilities

Collaboration & Mentorship

- Work closely with Product Managers and cross-functional engineering teams
 - Participate in sprint planning, technical estimation, and architectural discussions
 - Mentor junior developers through technical guidance and code reviews
 - Contribute to internal engineering documentation and best practices
 - Foster a collaborative, innovation-driven engineering culture
-

What We're Looking For

Required Qualifications

Experience

- 5+ years of professional PHP development experience
- Proven experience building large-scale web applications and backend systems
- Experience working within Agile software development environments
- Strong understanding of software design patterns and object-oriented programming

Technical Expertise

Strong experience with:

- PHP 8+
- Laravel or Symfony
- MySQL or PostgreSQL
- RESTful APIs
- Redis
- Composer
- Git
- Docker

Strong understanding of:

- Object-Oriented Programming (OOP)
- MVC architecture
- Design patterns and clean code principles
- Database optimization and query performance
- Caching strategies and queue systems
- Secure web application development
- Testing methodologies and CI/CD pipelines
- Cloud-native application development

Preferred Qualifications

- Experience working in fintech, SaaS, e-commerce, or enterprise software environments
 - Familiarity with microservices architecture and event-driven systems
 - Experience with AWS, Azure, or Google Cloud Platform
 - Experience with message brokers such as RabbitMQ, Kafka, or SQS
 - Knowledge of frontend technologies including Vue.js, React, or JavaScript frameworks
 - Experience mentoring engineers and contributing to technical leadership initiatives
-

Technology Environment

Backend Technologies

PHP 8+ • Laravel • Symfony • Composer • REST APIs

Databases & Caching

MySQL • PostgreSQL • Redis • Elasticsearch

Cloud & Infrastructure

AWS • Docker • Kubernetes • Terraform • GitHub Actions

Messaging & Integration

RabbitMQ • Kafka • SQS • Third-Party APIs

Testing & Quality

PHPUnit • Pest • Static Analysis Tools • CI/CD Pipelines

Tools & Collaboration

GitHub • Jira • Slack • Notion • Figma

Why Join Us

- ✦ Flexible remote, hybrid, and onsite work options
 - ✦ Full-time and part-time opportunities
 - ✦ Competitive compensation package
 - ✦ Opportunity to build scalable platforms and enterprise-grade applications
 - ✦ Exposure to innovative fintech, AI, and emerging technology initiatives
 - ✦ Collaborative, engineering-first culture focused on ownership and technical excellence
 - ✦ Career advancement into Lead Engineer, Staff Engineer, or Engineering Management
 - ✦ Strong investment in mentorship, continuous learning, and professional development
-

Apply

If you are passionate about modern PHP development, scalable backend architecture, and building software that delivers meaningful business impact, we'd love to connect with you.
