

Blockchain Engineering Lead

About Copia Group

Copia Group is building a next-generation Web3 fintech and payments platform — essentially “**Stripe for Web3.**”

Our goal is to make blockchain-based financial products easier to build, integrate, and use by combining blockchain infrastructure, payments, wallets, and intuitive product experiences.

As we expand globally, including our Australia operations, we're looking for an experienced **Blockchain Engineering Lead** to help shape and lead the engineering direction of our Web3 platform.

The Role

As **Blockchain Engineering Lead**, you will lead the development of blockchain-enabled products and services across our platform.

You will work across smart-contract integrations, Web3 applications, backend architecture, wallets, blockchain APIs, and engineering standards. This is a hands-on leadership role for someone who enjoys both building systems and guiding engineering decisions.

You will work closely with product, frontend, backend, and other technical stakeholders to turn complex blockchain capabilities into reliable, production-ready financial products.

Key Responsibilities

- Lead the technical development of blockchain and Web3 components across the Copia platform.
- Design and implement scalable Web3 application architecture.
- Lead integrations with EVM-compatible blockchains, wallets, smart contracts, and third-party Web3 infrastructure.
- Design and maintain blockchain-enabled backend services and REST APIs.
- Guide smart-contract integration patterns and Web3 transaction flows.
- Build reliable wallet connection, signing, transaction, and asset-management workflows.
- Establish engineering standards for security, testing, code quality, and maintainability.
- Review architecture, technical designs, and pull requests.
- Mentor and support other blockchain and full-stack engineers.

- Work with product and design teams to translate Web3 requirements into practical technical solutions.
- Investigate blockchain transaction issues, integration failures, and production incidents.
- Help define the technical roadmap for Copia's blockchain engineering capabilities.
- Evaluate new blockchain protocols, Web3 infrastructure providers, developer tools, and emerging technologies.
- Contribute hands-on code to critical blockchain and backend components.

Technical Scope

You will work across areas such as:

- EVM-compatible blockchains
- Smart-contract integrations
- Web3 dApps
- Wallet integrations
- Blockchain transactions
- Token and asset integrations
- DeFi integrations
- Web3 payment flows
- Blockchain APIs and RPC infrastructure
- Backend services and REST APIs
- Authentication and authorization
- Cross-chain integrations
- Blockchain data and event processing
- Security and transaction reliability

Required Experience

- 5+ years of professional software engineering experience.
- Strong hands-on experience building **Blockchain/Web3 applications**.
- Professional experience with **Node.js** and modern JavaScript/TypeScript.
- Strong understanding of **EVM-based blockchain architecture**.
- Experience integrating smart contracts into production applications.
- Strong understanding of wallets, transactions, signing, tokens, and blockchain interactions.
- Experience with Web3 libraries and tooling.
- Experience designing and consuming RESTful APIs.
- Strong understanding of backend architecture and distributed systems.
- Experience working with relational and/or NoSQL databases.
- Strong Git and CI/CD practices.
- Experience reviewing code and mentoring engineers.
- Ability to take ownership of technical problems from architecture through production.

Preferred Experience

- Solidity development or strong Solidity integration experience.
- Experience with **React, Next.js, Vue.js, or similar modern frontend frameworks.**
- Experience building production DeFi, DEX, wallet, payment, or trading applications.
- Experience with multi-chain or cross-chain systems.
- Experience integrating crypto payment providers.
- Experience with Stripe-like payment infrastructure or financial APIs.
- Experience with cloud platforms such as AWS, GCP, or Azure.
- Experience with Docker and modern deployment infrastructure.
- Understanding of blockchain security and common smart-contract vulnerabilities.
- Experience working in a startup or rapidly evolving product environment.

Leadership Expectations

This role is not purely a people-management position.

We are looking for a **hands-on engineering leader** who can:

- Make strong architectural decisions.
- Write and review production code.
- Establish technical standards.
- Break complex blockchain problems into practical solutions.
- Mentor engineers and raise the team's technical level.
- Communicate effectively with product and business stakeholders.
- Balance security, scalability, development speed, and user experience.
- Take ownership when systems move from prototype to production.

What Success Looks Like

Within the first 6–12 months, you will have:

- Established the technical foundation for Copia's blockchain engineering stack.
- Delivered production-ready Web3 integrations.
- Improved the reliability and security of blockchain transaction flows.
- Established reusable patterns for wallet, smart-contract, and blockchain integrations.
- Helped build and mentor the blockchain engineering team.
- Contributed to the technical roadmap for Copia's Web3 fintech platform.
- Helped turn complex blockchain infrastructure into simple financial experiences for users.

Why Join Copia Group?

- Build a product at the intersection of **FinTech, payments, and Web3**.
- Help create the “**Stripe for Web3**.”
- High ownership and influence over the technical direction.
- Opportunity to work across blockchain, payments, wallets, and financial infrastructure.
- Work with an international engineering and recruitment organization.
- Participate in our global expansion, including Australia.
- Hands-on role with significant architectural and product impact.

Ideal Candidate

The ideal candidate is a senior Web3 engineer who has moved beyond simply implementing features and is ready to **own blockchain engineering direction**.

You should be comfortable going deep into technical problems, making architecture decisions, reviewing code, mentoring engineers, and still writing code yourself.

Most importantly, you should understand that successful Web3 fintech is not only about blockchain technology — it is about making blockchain-powered financial products **secure, reliable, scalable, and easy to use**.
