

CTO / Blockchain Engineering Lead

Company: Copia Group, LLC

Location: Australia / Remote

Type: Full-time

Department: Engineering / Blockchain Infrastructure

Level: Executive / Senior Leadership

About Copia Group

Copia Group is building a next-generation **Web3 fintech and payments platform — essentially “Stripe for Web3.”**

Our goal is to make blockchain-based financial infrastructure easier for businesses, developers, and financial institutions to integrate, while providing reliable infrastructure for payments, digital assets, liquidity, and financial products.

As we expand globally, including establishing our presence in **Australia**, we're looking for a technically exceptional leader to help shape the blockchain architecture and engineering organization from the ground up.

The Role

We are looking for a **CTO / Blockchain Engineering Lead** to own the technical direction of our blockchain and Web3 infrastructure.

This is a **hands-on leadership role**. You will not simply manage engineering teams — you'll be expected to participate in architecture decisions, protocol design, technical strategy, security, infrastructure, and critical implementation work.

You will work closely with product, business, and engineering stakeholders to turn the company's Web3 fintech vision into a scalable production platform.

The ideal candidate has deep experience with **blockchain protocols, EVM, distributed systems, wallets, payments, digital assets, and/or financial infrastructure**, combined with experience leading engineering teams or building products from zero to production.

Key Responsibilities

Blockchain & Technical Architecture

- Own the overall technical architecture for Copia's blockchain and Web3 infrastructure.
- Design scalable, secure and reliable blockchain-based financial systems.
- Lead architecture decisions across **EVM, smart contracts, blockchain nodes, APIs, wallets, payment infrastructure and distributed systems**.
- Evaluate blockchain protocols, infrastructure providers and emerging Web3 technologies.
- Design systems capable of supporting high transaction volumes and institutional-grade reliability.
- Establish technical standards for scalability, security, observability and maintainability.

Web3 / Financial Infrastructure

- Help architect blockchain-based **payment and settlement infrastructure**.
- Work with digital assets, stablecoins, wallets, liquidity and transaction infrastructure.
- Design integrations with blockchain networks, custodians, exchanges, liquidity providers and financial institutions.
- Help establish secure transaction, signing and custody architectures.
- Identify opportunities to simplify blockchain integration for businesses and developers.

Engineering Leadership

- Build and lead a high-performing blockchain engineering team.
- Define engineering standards, development processes and technical best practices.
- Mentor senior engineers and technical leads.
- Participate in hiring and building the engineering organization.
- Establish an engineering culture focused on ownership, quality and execution.
- Work closely with Product and Business leadership on technical strategy and roadmap.

Security & Reliability

- Own the security architecture of blockchain-related systems.
- Establish practices for smart-contract and infrastructure security.
- Lead security reviews, threat modeling and technical risk assessments.
- Design systems that can safely handle financial transactions and digital assets.
- Lead incident response and recovery for critical blockchain infrastructure.

Product & Company Strategy

- Translate the company's business vision into a long-term technical roadmap.
- Work directly with founders and senior leadership on product and technology strategy.

- Assess build-vs-buy decisions and external technology partnerships.
 - Represent the technical organization with strategic partners and customers when required.
 - Help define the company's long-term blockchain infrastructure strategy.
-

Required Qualifications

- **8+ years of software engineering experience**, with significant experience in blockchain/Web3.
 - Strong experience designing and building **production blockchain systems**.
 - Deep understanding of blockchain architecture and distributed systems.
 - Strong experience with one or more of:
 - **EVM / Ethereum**
 - Solidity
 - Go
 - Cosmos SDK
 - Rust
 - Substrate
 - Layer-1 / Layer-2 infrastructure
 - Smart-contract infrastructure
 - Strong understanding of blockchain transactions, consensus, networking and on-chain state.
 - Experience with **wallets, exchanges, payments, custody, liquidity or digital-asset infrastructure** is highly valuable.
 - Experience designing scalable backend systems and APIs.
 - Experience with cloud infrastructure, containers and Kubernetes.
 - Strong understanding of security principles for financial and blockchain systems.
 - Previous experience leading engineers, technical teams, or a technology organization.
 - Ability to operate effectively at both **strategic and hands-on technical levels**.
-

Highly Preferred

Experience with:

- Stablecoins and digital-asset payments
- Cross-border payments
- Blockchain bridges / interoperability
- IBC
- Layer-1 / Layer-2 systems

- Account abstraction
 - Custody infrastructure
 - Liquidity management
 - DEX / DeFi infrastructure
 - Smart-contract security
 - Blockchain node infrastructure
 - Transaction indexing
 - Event-driven architectures
 - Financial APIs
 - Institutional digital-asset infrastructure
 - Regulatory or compliance considerations in fintech
-

Leadership Profile

We're looking for someone who:

- Thinks like an **architect and builder**, not only a manager.
 - Can take a system from **zero** → **architecture** → **production**.
 - Is comfortable making difficult technical decisions.
 - Understands the difference between a blockchain prototype and **production-grade financial infrastructure**.
 - Can communicate complex technical concepts clearly to non-technical stakeholders.
 - Takes ownership of problems rather than waiting for instructions.
 - Can build and mentor a strong engineering organization.
 - Is excited about building something ambitious in **Web3 fintech and payments**.
-

What You'll Own

As CTO / Blockchain Engineering Lead, you will have ownership across:

Blockchain Architecture → **Web3 Infrastructure** → **Payments Infrastructure** → **Security** → **Engineering Team** → **Technical Roadmap**

You will have a significant influence on how Copia's technology platform is designed and built.

Why Join Copia Group?

- Build a **Web3 fintech platform from the ground up**.
- Help create “**Stripe for Web3**” infrastructure.
- Work at the intersection of **payments, blockchain and financial technology**.
- High level of technical ownership and autonomy.
- Opportunity to shape the engineering organization and architecture.
- Global expansion, including our **Australia presence**.
- Work directly with leadership on product and technology strategy.

The ideal candidate

We're particularly interested in engineers who have **built real blockchain infrastructure**, not just interacted with Web3 APIs.
