

Lead DevOps Engineer

Cloud Infrastructure, Platform Reliability & Engineering Excellence

-  Remote / Hybrid / Onsite
 -  Full-Time or Part-Time
 -  The Copia Group, LLC
 -  Lead Level
-

About The Copia Group

The Copia Group is an investment management firm supporting innovative companies across fintech, digital infrastructure, commerce, and emerging technology sectors.

Through strategic investments and partnerships, we help advance the development of modern financial services, payment technologies, developer platforms, and scalable software solutions used by businesses worldwide.

We are seeking an experienced **Lead DevOps Engineer** to drive infrastructure strategy, improve platform reliability, and lead the evolution of our cloud-native engineering practices.

The Opportunity

As a Lead DevOps Engineer, you will play a critical role in designing and scaling infrastructure that supports modern applications and engineering teams. You will lead initiatives focused on automation, reliability, observability, security, and operational excellence.

Working closely with software engineers, security teams, and technical leadership, you will help establish best practices and build resilient systems that enable teams to deliver products efficiently and confidently.

This role combines hands-on technical expertise with leadership responsibilities and strategic influence across multiple engineering initiatives.

What You'll Do

Infrastructure & Platform Engineering

- Design, build, and maintain scalable cloud infrastructure environments
- Develop and improve Infrastructure as Code (IaC) solutions
- Lead containerization and orchestration initiatives across engineering teams
- Support highly available, secure, and resilient production systems
- Drive platform standardization and infrastructure modernization efforts

Automation & CI/CD

- Design and optimize CI/CD pipelines to improve software delivery processes
- Automate deployment, provisioning, and operational workflows
- Implement release strategies that improve deployment reliability and efficiency
- Reduce manual processes through tooling and infrastructure automation
- Continuously improve engineering productivity through platform enhancements

Reliability & Operations

- Establish monitoring, logging, and observability standards across environments
- Lead incident response efforts and post-incident reviews
- Improve system performance, uptime, and disaster recovery capabilities
- Define and monitor reliability objectives and operational metrics
- Champion a proactive approach to identifying and mitigating operational risks

Leadership & Collaboration

- Mentor DevOps and infrastructure engineers across the organization
- Partner with engineering teams to embed DevOps best practices into development workflows
- Collaborate with Security teams to strengthen infrastructure security posture
- Provide technical leadership on cross-functional initiatives and major projects
- Influence infrastructure strategy and long-term platform roadmaps

What We're Looking For

Required Qualifications

Experience

- 7+ years of professional experience in DevOps, Site Reliability Engineering, or Infrastructure Engineering
- 2+ years of experience leading technical initiatives or mentoring engineering teams
- Proven experience managing production environments supporting business-critical applications
- Experience working within Agile and fast-paced engineering organizations

Technical Expertise

Strong experience with:

- Cloud platforms (AWS, Azure, or GCP)
- Infrastructure as Code (Terraform, CloudFormation, or similar tools)
- Docker and containerization technologies
- Kubernetes and container orchestration platforms
- CI/CD pipeline design and implementation
- Linux systems administration
- Monitoring and observability platforms
- Scripting and automation practices

Strong understanding of:

- High availability and fault-tolerant architectures
 - Incident response and operational excellence
 - Networking fundamentals and cloud security principles
 - Performance optimization and scalability strategies
 - DevSecOps concepts and secure infrastructure practices
-

Preferred Qualifications

- Experience working in fintech, payments, SaaS, or highly regulated industries
 - Familiarity with Stripe integrations and payment infrastructure environments
 - Experience with GitHub Actions, Jenkins, CircleCI, or GitLab CI
 - Experience implementing SRE principles and reliability engineering practices
 - Experience supporting microservices and event-driven architectures
 - Certifications in AWS, Kubernetes, Terraform, or related technologies
-

Technology Environment

Cloud & Infrastructure

AWS • Azure • GCP • Linux

Containerization & Orchestration

Docker • Kubernetes • Helm

Infrastructure as Code

Terraform • CloudFormation • Ansible

CI/CD & Automation

GitHub Actions • Jenkins • GitLab CI • CircleCI

Observability & Monitoring

Prometheus • Grafana • Datadog • ELK Stack

Tools & Collaboration

GitHub • Jira • Slack • Notion

Why Join Us

- ✦ Flexible remote, hybrid, and onsite work options
 - ✦ Full-time and part-time opportunities
 - ✦ Competitive compensation package
 - ✦ Opportunity to shape infrastructure strategy and engineering practices
 - ✦ Exposure to innovative fintech and emerging technology initiatives
 - ✦ Collaborative and engineering-first culture
 - ✦ Leadership opportunities with broad organizational impact
 - ✦ Strong investment in automation, reliability, and continuous improvement
-

Apply

If you are passionate about cloud infrastructure, automation, and building reliable systems that empower engineering teams to move faster, we'd love to connect with you.
