

Rust Engineering Manager

Engineering Leadership, Distributed Systems & High-Performance Platform Development

-  Remote / Hybrid / Onsite
 -  Full-Time or Part-Time
 -  The Copia Group, LLC
 -  Engineering Management
-

About The Copia Group

The Copia Group is an investment management firm supporting innovative companies across blockchain, fintech, AI, digital infrastructure, and emerging technology sectors.

Through strategic investments and partnerships, we help accelerate the growth of technology-driven businesses building secure, scalable, and high-performance platforms. Our portfolio companies leverage modern systems programming, cloud-native infrastructure, and distributed architectures to solve complex engineering challenges across Web3, financial services, and enterprise software.

We are seeking an experienced **Rust Engineering Manager** to lead high-performing engineering teams while driving the development of reliable, scalable, and performance-critical software built with Rust.

The Opportunity

As a Rust Engineering Manager, you will combine technical leadership with people management to build and scale modern backend systems, blockchain infrastructure, and distributed applications. You'll partner with Product Managers, Architects, DevOps Engineers, and Engineering Leadership to deliver high-impact products while fostering a culture of engineering excellence.

This role is ideal for a hands-on engineering leader who enjoys mentoring engineers, shaping technical direction, and building resilient systems using Rust and modern cloud technologies.

What You'll Do

Engineering Leadership

- Lead, mentor, and grow a team of Rust Software Engineers across multiple projects
- Build an inclusive, collaborative, and high-performing engineering culture
- Manage hiring, onboarding, performance reviews, and career development
- Establish engineering standards, coding guidelines, and development best practices
- Foster continuous learning through coaching, technical mentorship, and knowledge sharing

Technical Strategy & Architecture

- Guide the architecture and development of scalable backend platforms and distributed systems
- Drive technical decision-making across Rust applications, microservices, and infrastructure
- Review system designs and ensure maintainability, reliability, and long-term scalability
- Evaluate emerging technologies and recommend improvements to the technology stack
- Promote secure software engineering and operational excellence

Software Development

- Collaborate with engineers to build high-performance backend services and APIs
- Support the development of blockchain infrastructure, cloud platforms, or enterprise applications
- Ensure code quality through technical reviews and engineering best practices
- Improve application performance, observability, and deployment automation
- Participate in architecture discussions and complex technical problem-solving

Cross-Functional Collaboration

- Work closely with Product Managers to define technical roadmaps and delivery plans
 - Partner with DevOps, QA, Security, and Platform teams throughout the software lifecycle
 - Balance technical priorities with business objectives and product goals
 - Identify delivery risks and proactively implement mitigation strategies
 - Communicate engineering progress and technical strategy to executive leadership
-

What We're Looking For

Required Qualifications

Experience

- 8+ years of professional software engineering experience
- 3+ years of engineering management or technical leadership experience
- 3+ years of hands-on Rust development in production environments
- Proven experience building scalable distributed systems or cloud-native applications
- Experience leading Agile software development teams

Technical Expertise

Strong experience with:

- Rust
- Tokio
- Axum, Actix Web, or Rocket
- Cargo
- REST APIs and gRPC
- PostgreSQL
- Redis
- Docker
- Kubernetes
- Git

Strong understanding of:

- Distributed systems architecture
- Concurrency and asynchronous programming
- Microservices architecture
- Cloud-native development
- Event-driven systems

- Performance optimization
 - CI/CD pipelines
 - Secure software development practices
-

Preferred Qualifications

- Experience building blockchain infrastructure, DeFi platforms, or Web3 applications
 - Experience with Kafka, RabbitMQ, NATS, or Apache Pulsar
 - Familiarity with AWS, Azure, or Google Cloud Platform
 - Experience with Infrastructure as Code using Terraform or Pulumi
 - Knowledge of observability tools including Prometheus, Grafana, OpenTelemetry, or Datadog
 - Contributions to open-source Rust projects or participation in the Rust community
-

Technology Environment

Programming Languages

Rust • Go • Python • TypeScript

Rust Ecosystem

Tokio • Axum • Actix Web • Rocket • Serde • SQLx • Diesel • Tonic

Cloud & Infrastructure

AWS • Docker • Kubernetes • Terraform • GitHub Actions

Databases & Messaging

PostgreSQL • Redis • Kafka • RabbitMQ • NATS

Observability & Monitoring

Prometheus • Grafana • OpenTelemetry • Datadog

Tools & Collaboration

GitHub • Jira • Slack • Notion • Figma

Why Join Us

- ✨ Flexible remote, hybrid, and onsite work options
 - ✨ Full-time and part-time opportunities
 - ✨ Competitive compensation package
 - ✨ Opportunity to lead engineering teams building high-performance systems and next-generation infrastructure
 - ✨ Exposure to blockchain, fintech, AI, and emerging technology initiatives
 - ✨ Collaborative, engineering-first culture focused on innovation, ownership, and technical excellence
 - ✨ Career advancement into Director of Engineering, Head of Engineering, VP of Engineering, or CTO
 - ✨ Strong investment in leadership development, continuous learning, open-source contributions, and engineering innovation
-

Apply

If you are passionate about leading exceptional engineering teams, building high-performance Rust applications, and delivering scalable software that powers the next generation of technology, we'd love to connect with you.
