

Senior Blockchain Engineer (Rust)

Web3 Infrastructure, Protocol Development & Digital Asset Platforms

-  Remote / Hybrid / Onsite
 -  Full-Time or Part-Time
 -  The Copia Group, LLC
 -  Senior Level
-

About The Copia Group

The Copia Group is an investment management firm supporting innovative companies across fintech, blockchain, digital infrastructure, and emerging technology sectors.

Through strategic investments and partnerships, we help advance the development of decentralized technologies, digital asset ecosystems, and next-generation financial platforms shaping the future of global commerce.

We are seeking an experienced **Senior Blockchain Engineer (Rust)** to build secure, scalable, and high-performance blockchain solutions that support modern Web3 applications and infrastructure initiatives.

The Opportunity

As a Senior Blockchain Engineer specializing in Rust, you will play a critical role in designing and developing blockchain protocols, smart contract systems, and decentralized applications.

You will work closely with product leaders, researchers, and engineering teams to deliver innovative blockchain solutions while driving technical excellence across distributed systems and digital asset platforms.

This role offers significant technical ownership, architectural influence, and the opportunity to contribute to the evolution of blockchain technologies at scale.

What You'll Do

Blockchain & Protocol Engineering

- Design, develop, and maintain blockchain applications using Rust
- Build secure and efficient smart contract solutions for decentralized ecosystems
- Develop core protocol components, validators, and node-related services
- Implement wallet integrations and blockchain interaction layers
- Write clean, maintainable, and production-ready code for mission-critical systems

Distributed Systems & Infrastructure

- Architect scalable backend services supporting blockchain applications
- Optimize transaction processing, network performance, and system reliability
- Develop event-driven services and infrastructure components
- Improve monitoring, observability, and operational resilience across blockchain environments
- Support cloud-native deployment strategies and infrastructure automation initiatives

Security & Quality

- Apply blockchain security best practices throughout the development lifecycle
- Conduct code reviews, testing activities, and smart contract validation processes
- Identify vulnerabilities and proactively address technical risks
- Collaborate with internal teams and external auditors to strengthen platform security
- Promote engineering excellence and quality standards across projects

Leadership & Collaboration

- Mentor engineers and contribute to technical knowledge sharing initiatives
- Participate in architecture reviews and strategic technology discussions
- Work cross-functionally with product, infrastructure, and research teams
- Take ownership of projects from concept through deployment and maintenance

- Contribute to the continuous improvement of engineering practices and development workflows
-

What We're Looking For

Required Qualifications

Experience

- 5+ years of professional software engineering experience
- 2+ years of experience building blockchain or distributed systems applications
- Strong experience developing production systems using Rust
- Proven track record delivering scalable and secure software solutions

Technical Expertise

Strong experience with:

- Rust programming language
- Blockchain architecture and decentralized systems
- Smart contract development concepts
- Distributed systems design
- API development and backend engineering
- Event-driven architectures
- Performance optimization and concurrency models
- Security best practices for blockchain applications

Strong understanding of:

- Consensus mechanisms and transaction lifecycles
 - Digital asset ecosystems and token standards
 - Cryptographic principles and blockchain fundamentals
 - Infrastructure automation and cloud-native environments
 - CI/CD pipelines and software delivery processes
-

Preferred Qualifications

- Experience working with Solana, Polkadot, Substrate, NEAR, or other Rust-based blockchain ecosystems
 - Familiarity with Ethereum and EVM interoperability concepts
 - Experience building DeFi applications, staking systems, or blockchain infrastructure products
 - Experience with Docker, Kubernetes, Terraform, and cloud platforms such as AWS or GCP
 - Experience working in fintech, Web3 startups, or high-growth technology environments
 - Contributions to open-source blockchain projects or developer communities
-

Technology Environment

Blockchain & Protocols

Rust • Solana • Substrate • Polkadot • NEAR • Web3

Backend & Infrastructure

REST APIs • gRPC • Distributed Systems • Event-Driven Architecture

Cloud & DevOps

AWS • Docker • Kubernetes • Terraform • CI/CD

Data & Messaging

PostgreSQL • Redis • Kafka

Tools & Collaboration

GitHub • Jira • Slack • Notion

Why Join Us

✨ Flexible remote, hybrid, and onsite work options

✨ Full-time and part-time opportunities

- ✨ Competitive compensation package
 - ✨ Opportunity to build cutting-edge blockchain infrastructure
 - ✨ Exposure to innovative Web3 and digital asset initiatives
 - ✨ Collaborative and engineering-driven culture
 - ✨ Career advancement and technical leadership opportunities
 - ✨ Strong emphasis on ownership, innovation, and continuous learning
-

Apply

If you are passionate about Rust development, decentralized technologies, and building secure blockchain systems that power the next generation of digital experiences, we'd love to connect with you.
