

Senior / Lead Frontend Engineer — Web3 Fintech & Payments

Company: Copia Group, LLC

Location: Australia / Remote

Industry: Web3 · Fintech · Digital Asset Payments

About Copia Group

Copia Group is building a **Web3 fintech and payments platform — essentially “Stripe for Web3.”**

Our goal is to make digital-asset payments, wallets, financial products, and blockchain-based services easier for businesses and users to integrate and use.

As we expand globally, including our presence in Australia, we're building a strong engineering team focused on scalable, secure, and intuitive Web3 financial products.

About the Role

We are looking for a **Senior / Lead Frontend Engineer** to help shape and build the user-facing experience of our Web3 fintech platform.

This is more than a UI implementation role. You will have an opportunity to influence **product architecture, technical decisions, UX, engineering standards, and the overall product direction.**

The ideal candidate is someone who can work comfortably across frontend, mobile, backend integrations, and product development — and who enjoys working in a startup environment where engineers have significant ownership.

Responsibilities

- Lead frontend architecture and development for Web3 fintech and payment products.
- Build high-quality web applications using **React, TypeScript and Next.js**.
- Develop cross-platform mobile experiences using **React Native**.
- Design reusable component systems and scalable frontend architectures.
- Integrate frontend applications with APIs, wallets, blockchain infrastructure, and financial services.

- Work with product and design teams to translate requirements into intuitive user experiences.
- Participate in technical architecture and product decisions.
- Help establish engineering standards, testing practices, documentation, and development workflows.
- Collaborate with backend and blockchain engineers on API, transaction, and data flows.
- Contribute to Web3 features including wallets, transactions, payments, digital assets, and blockchain integrations.
- Troubleshoot performance and scalability issues across web and mobile applications.
- Mentor other engineers and contribute to the technical growth of the team.
- Take ownership of features from initial concept through production.

Required Skills

- Strong professional experience with **React and TypeScript**.
- Strong experience building production frontend applications.
- Experience with **Next.js** or similar modern React frameworks.
- Strong understanding of frontend architecture and reusable component systems.
- Experience with **React Native** and cross-platform mobile development.
- Experience integrating REST or GraphQL APIs.
- Strong understanding of JavaScript/TypeScript ecosystem.
- Experience with automated testing and modern CI/CD workflows.
- Understanding of cloud-based application development.
- Strong Git and software engineering practices.
- Ability to work independently and take ownership of technical decisions.

Nice to Have — Web3

Experience with one or more of the following is highly valuable:

- Blockchain / Web3 applications
- Crypto wallets
- EVM ecosystems
- Smart-contract integrations
- Web3 authentication
- Digital-asset payments
- Stablecoins
- DeFi
- DEX interfaces
- WalletConnect or similar wallet infrastructure
- Blockchain transaction flows
- Web3 APIs and SDKs

Backend / Full-Stack Experience

Experience beyond the frontend is a strong advantage:

- Node.js
- Elixir / Phoenix
- GraphQL
- WebSockets
- PostgreSQL
- AWS
- Microservices
- Real-time applications

What We're Looking For

We value engineers who:

- Think beyond tickets and understand the **product as a whole**.
- Are comfortable taking a feature from **idea** → **architecture** → **implementation** → **production**.
- Can work effectively in a fast-moving startup environment.
- Care about performance, scalability, security, and user experience.
- Are curious about blockchain and financial technology.
- Can communicate clearly with engineers, product managers, designers, and business stakeholders.
- Enjoy taking ownership and making technical decisions rather than simply following specifications.

Why Join

- Build a product at the intersection of **Web3, fintech, and payments**.
- Help build a platform envisioned as “**Stripe for Web3**.”
- Significant ownership over frontend architecture and product development.
- Work across web, mobile, APIs, and blockchain integrations.
- Opportunity to influence an early-stage product and engineering culture.
- International team and global expansion.
- Opportunity to grow into a **Frontend Lead, Web3 Engineering Lead, or Founding Engineer** position as the organization scales.

Ideal Candidate Profile

The strongest candidate will be a senior frontend engineer who combines:

React + TypeScript + React Native + Product Thinking + Full-Stack Understanding + Web3 Interest

Direct blockchain experience is highly desirable, but we are particularly interested in engineers who have demonstrated the ability to learn complex technologies quickly and take meaningful ownership of products.

Employment: Full-time

Seniority: Senior / Lead

Domain: Web3 Fintech & Payments
