

Founding Web3 / Product Engineer

Location: Remote / Global

Employment Type: Full-time

Department: Engineering / Product

Level: Founding / Senior / Staff

About Copia Group

Copia Group is building a “**Stripe for Web3**” — a next-generation fintech and payments infrastructure platform designed to make blockchain payments, digital assets, and Web3 financial products simple, reliable, and accessible.

As an early member of the engineering team, the **Founding Web3 / Product Engineer** will have significant ownership over the product, technology, and engineering direction.

This role is ideal for someone who enjoys moving from **idea** → **architecture** → **code** → **deployment** → **user feedback** and wants to help build a product from the ground up.

The Role

We're looking for a highly autonomous engineer who combines **strong Web3 engineering skills with product thinking**.

You'll work across the stack and help turn ambiguous product ideas into production-ready Web3 experiences. You'll collaborate directly with engineering, product, design, and leadership to define what we build and how we build it.

You won't be limited to a single technical area. Depending on the problem, you may work on:

Smart contracts → **Backend** → **APIs** → **Blockchain integrations** → **DApps** → **Wallets** → **Payments** → **Infrastructure** → **Product features**

Key Responsibilities

- Take ownership of product features from concept through production.
- Translate product requirements and user problems into technical solutions.
- Design and build Web3 applications and financial products.
- Develop and integrate **smart contracts and blockchain protocols**.
- Build backend services, APIs, transaction-processing systems, and blockchain integrations.

- Develop frontend experiences using modern frameworks such as **React / Next.js / TypeScript**.
- Implement wallet connections, transaction flows, token functionality, and on-chain interactions.
- Work with EVM-compatible networks and potentially other blockchain ecosystems.
- Design scalable architectures for Web3 fintech and payment products.
- Work closely with product and design to simplify complex blockchain experiences.
- Identify technical risks and make pragmatic architecture decisions.
- Build prototypes quickly to validate product hypotheses.
- Take ownership of deployment, monitoring, testing, and production reliability.
- Investigate production issues and continuously improve the platform.
- Establish engineering standards, development workflows, and best practices.
- Contribute to technical strategy and the long-term architecture of the company.
- Mentor future engineers as the team grows.

Requirements

- **5+ years of software engineering experience**, with significant Web3/blockchain experience.
- Strong hands-on experience building **production Web3 applications**.
- Strong understanding of **Ethereum / EVM** and blockchain fundamentals.
- Experience with one or more of:
 - Solidity
 - TypeScript / Node.js
 - React / Next.js
 - Go
 - Rust
 - Python
- Experience interacting with smart contracts and blockchain networks.
- Strong understanding of wallets, transactions, RPCs, tokens, gas, and blockchain events.
- Experience building APIs and backend services.
- Comfortable working across frontend and backend when required.
- Experience with databases such as PostgreSQL, Redis, or similar.
- Familiarity with Docker, cloud infrastructure, and CI/CD.
- Strong understanding of software architecture and security.
- Ability to work independently with minimal supervision.
- Strong product mindset and willingness to challenge assumptions.
- Excellent problem-solving and communication skills.

Strong Web3 Experience

Experience with several of the following is highly valuable:

- DeFi
- Stablecoins
- Web3 payments
- Tokenization / RWAs
- Wallet infrastructure
- DApps
- Smart-contract development
- ERC-20 / ERC-721 / ERC-1155
- EVM L1/L2 networks
- Account abstraction
- On-chain indexing
- Blockchain analytics
- Cross-chain protocols
- Payment infrastructure
- Digital asset infrastructure

Product Engineering Mindset

We're especially interested in engineers who don't simply wait for specifications.

You should be comfortable asking:

- **What problem are we actually solving?**
- **What should we build first?**
- **Can we validate this idea quickly?**
- **How can we make the Web3 experience feel as simple as Web2?**
- **What is the simplest architecture that can scale?**
- **What should we automate?**

You should enjoy working closely with product and design and be willing to contribute to **UX, architecture, technical strategy, and product decisions**.

Nice to Have

- Previous startup or founding-team experience.
- Experience taking a product from **0** → **1**.
- Experience launching a Web3 protocol, DApp, wallet, exchange, or payment product.
- Experience in fintech, payments, banking, or financial infrastructure.
- Experience with AWS/GCP/Azure.
- Kubernetes / Terraform experience.
- Experience with blockchain indexing and event processing.
- Experience with security reviews or smart-contract auditing.
- Experience with AI-assisted development and AI agents.

- Open-source contributions or notable GitHub projects.

What You'll Own

As a founding engineer, you'll have ownership across:

Product Discovery → Architecture → Development → Blockchain Integration → Testing → Deployment → Monitoring → Iteration

Your work will directly influence the technical foundation and product direction of Copia Group.

What We Offer

- Founding-level ownership and influence.
- Opportunity to build a “**Stripe for Web3**” from an early stage.
- Direct involvement in product and technical decisions.
- Work across **Web3, fintech, payments, blockchain, and digital assets**.
- Remote-friendly international environment.
- Opportunity to help shape the engineering culture and future team.
- Competitive compensation based on experience and location.
- Potential for significant career growth as the company scales internationally, including its Australia expansion.

Ideal Candidate

The ideal candidate is a **senior Web3 engineer who thinks like a product builder**.
