

Lead Flutter / Mobile Web3 Engineer

Company Overview

Copia Group, LLC is building a next-generation **Web3 fintech and payments platform — essentially “Stripe for Web3.”** Our goal is to make blockchain-based payments and financial infrastructure easier to use, integrate, and scale for businesses and end users.

As we expand internationally, including our presence in **Australia**, we are building the engineering team responsible for turning this vision into production-ready products across mobile, web, blockchain, and payment infrastructure.

We are looking for a **Lead Flutter / Mobile Web3 Engineer** who can take ownership of the mobile product from architecture through production and help shape how users interact with Web3 financial services.

Role Overview

As **Lead Flutter / Mobile Web3 Engineer**, you will own the architecture and development of cross-platform mobile applications connecting users to Web3 wallets, blockchain networks, and payment infrastructure.

This is a **hands-on technical leadership role**. You will write production code, establish engineering standards, make architectural decisions, and work closely with backend, blockchain, product, and design teams.

You will have significant ownership over the mobile product and help define the technical direction as the platform scales.

Key Responsibilities

- Lead the architecture and development of cross-platform **Flutter/Dart mobile applications**.
- Build secure, scalable mobile experiences for Web3 payments and financial products.
- Integrate blockchain wallets, transaction flows, signing, and on-chain interactions into mobile applications.
- Design and implement mobile architecture using patterns such as **Clean Architecture, BLoC/Cubit, Riverpod, or equivalent approaches**.
- Integrate REST APIs, WebSockets, authentication systems, and backend services.

- Build transaction history, balances, payments, deposits, withdrawals, and other financial workflows.
- Integrate EVM-compatible blockchain networks and Web3 infrastructure.
- Work with wallet technologies, WalletConnect, EIP standards, RPC providers, and blockchain APIs.
- Collaborate with smart-contract engineers to ensure reliable mobile-to-contract interactions.
- Establish testing standards including unit, widget, integration, and end-to-end testing.
- Own mobile performance, security, reliability, and release processes.
- Establish CI/CD pipelines for iOS and Android.
- Review code and mentor other engineers as the mobile team grows.
- Translate product requirements into scalable technical solutions.
- Work closely with product and design teams to create intuitive financial and Web3 experiences.
- Diagnose and resolve complex issues across the mobile, backend, wallet, and blockchain layers.

Technical Requirements

Required

- 6+ years of professional software engineering experience.
- Strong commercial experience with **Flutter and Dart**.
- Experience shipping production **iOS and Android applications**.
- Strong understanding of mobile application architecture.
- Experience with state management such as **BLoC/Cubit, Riverpod, Provider**, or similar.
- Strong knowledge of REST APIs and backend integration.
- Experience with authentication, secure storage, deep linking, push notifications, and mobile security.
- Strong testing experience with Flutter.
- Experience working with Git and modern CI/CD workflows.
- Strong understanding of software engineering principles, clean code, and scalable architecture.
- Professional experience with **Web3/blockchain integrations**.

Web3 Experience

You should have practical experience with several of the following:

- EVM chains
- Ethereum
- Solidity / smart contracts
- WalletConnect

- MetaMask or other Web3 wallets
- Ethers.js / Web3.js concepts
- JSON-RPC
- Transaction signing
- Token transfers
- ERC-20 / ERC-721 / ERC-1155
- On-chain transaction monitoring
- Blockchain indexing
- Gas estimation and transaction lifecycle management
- DeFi or crypto payment applications

Preferred Qualifications

- Experience building **crypto wallets or Web3 mobile applications**.
- Experience with blockchain payments or fintech products.
- Experience integrating **stablecoins** or crypto-to-fiat flows.
- Experience with account abstraction / smart accounts.
- Knowledge of ERC-4337 or related wallet infrastructure.
- Experience with secure key management or wallet security.
- Experience integrating payment providers such as Stripe or similar systems.
- Experience with Firebase, AWS, or equivalent cloud platforms.
- Experience leading engineers or owning a technical product area.
- Experience working in an early-stage startup environment.
- Backend experience with **Node.js, TypeScript, or similar** is a plus.

Leadership Expectations

This is not simply a senior Flutter development position.

You will be expected to:

- Own the mobile technical roadmap.
- Make architecture decisions and document technical direction.
- Establish coding and testing standards.
- Review important technical decisions and pull requests.
- Mentor other mobile engineers.
- Identify technical risks before they become production problems.
- Work directly with product and engineering leadership.
- Balance speed of delivery with long-term maintainability.
- Help build the mobile engineering team as the company scales.

Example Product Areas

You may work on features such as:

- Web3 wallet onboarding
- Account creation and recovery
- Crypto and stablecoin payments
- WalletConnect integrations
- Token balances and transaction history
- Send/receive flows
- Payment requests
- QR-based payments
- Fiat/crypto conversion flows
- Merchant payments
- Cross-chain transactions
- Smart-account functionality
- Transaction monitoring
- Notifications and payment status
- Mobile financial dashboards

Engineering Environment

Mobile

- Flutter
- Dart
- BLoC / Cubit / Riverpod
- iOS / Android

Web3

- Ethereum / EVM
- Solidity
- WalletConnect
- JSON-RPC
- Smart contracts
- ERC standards

Backend / Infrastructure

- TypeScript / Node.js
- REST / WebSocket APIs
- AWS
- Firebase

- PostgreSQL
- CI/CD

Development

- GitHub
- Automated testing
- Code review
- Observability and monitoring

What Success Looks Like

First 30 Days

- Understand the product architecture and Web3/payment infrastructure.
- Become productive in the existing Flutter codebase.
- Identify major technical and architectural opportunities.
- Establish strong relationships with product, backend, and blockchain engineers.

First 90 Days

- Own major mobile features from design through production.
- Improve mobile architecture, testing, and reliability.
- Establish standards for Web3 integrations and transaction handling.
- Contribute to the mobile technical roadmap.

6+ Months

- Lead the evolution of the mobile platform.
- Mentor and grow the mobile engineering team.
- Deliver reliable Web3 payment experiences at scale.
- Help shape the architecture of Copia Group's mobile financial ecosystem.

What We Offer

- High ownership and technical autonomy.
- Opportunity to build a **Web3 fintech/payments platform from the ground up.**
- Direct influence over mobile and product architecture.
- Work across Flutter, Web3, blockchain, and payments.
- International team and expansion opportunities.
- Opportunity to grow into a **Mobile Engineering Lead / Founding Engineer** position.
- Remote-friendly working environment.
- Competitive compensation based on experience and location.

Ideal Candidate

The ideal candidate is a **senior Flutter engineer who has moved beyond simply building screens**.

You understand mobile architecture, backend systems, security, and production operations — and you are genuinely interested in how blockchain and financial infrastructure can be brought into a simple consumer experience.

You should be comfortable taking a product from **architecture** → **implementation** → **testing** → **deployment** → **production**, while leading technical decisions along the way.

Role: Lead Flutter / Mobile Web3 Engineer

Level: Senior / Lead

Employment: Full-time / Contract

Location: Remote / International

Focus: Flutter · Dart · Web3 · Mobile · Blockchain · Fintech · Payments · Wallets · EVM
