

Lead Python Software Engineer

Backend Engineering, Cloud-Native Development & Technical Leadership

-  Remote / Hybrid / Onsite
 -  Full-Time or Part-Time
 -  The Copia Group, LLC
 -  Lead Level
-

About The Copia Group

The Copia Group is an investment management firm supporting innovative companies across fintech, AI, blockchain, digital infrastructure, and emerging technology sectors.

Through strategic investments and partnerships, we help accelerate the growth of technology-driven businesses by supporting the development of scalable software platforms, intelligent applications, financial technologies, and enterprise solutions. Our portfolio companies rely on modern cloud-native architectures and high-performance backend systems to power mission-critical products used around the world.

We are seeking an experienced **Lead Python Software Engineer** to lead the design, development, and delivery of scalable backend platforms while mentoring engineering teams and driving technical excellence.

The Opportunity

As a Lead Python Software Engineer, you will combine hands-on software development with technical leadership to build secure, scalable, and cloud-native applications. You'll collaborate closely with Product Managers, Frontend Engineers, DevOps, QA, and Engineering Leadership to architect backend systems, guide engineering decisions, and deliver reliable software that supports business growth.

This role offers significant ownership over technical strategy, software architecture, and engineering best practices while providing opportunities to mentor developers and shape the future of our technology platforms.

What You'll Do

Backend Development

- Design, develop, and maintain scalable backend applications using Python
- Build secure RESTful APIs, GraphQL services, and microservices for web and mobile platforms
- Develop high-performance services that process large volumes of data and transactions
- Write clean, maintainable, and well-tested production code
- Optimize application performance, scalability, and reliability

Technical Leadership

- Lead architecture discussions and technical design reviews
- Establish coding standards, engineering best practices, and development guidelines
- Mentor software engineers through code reviews, technical coaching, and knowledge sharing
- Drive modernization initiatives and continuous improvements across backend systems
- Evaluate emerging technologies and recommend adoption where appropriate

Cloud & Platform Engineering

- Design cloud-native applications and distributed systems
- Develop Infrastructure as Code (IaC) and deployment automation
- Build and optimize CI/CD pipelines for reliable software delivery
- Improve system observability through monitoring, logging, and tracing
- Partner with DevOps teams to ensure platform security, scalability, and operational excellence

Cross-Functional Collaboration

- Collaborate with Product Managers to transform business requirements into scalable technical solutions
 - Work closely with Frontend Engineers, QA, DevOps, and Data teams throughout the software development lifecycle
 - Participate in sprint planning, technical estimation, and roadmap discussions
 - Identify technical risks and implement effective mitigation strategies
 - Foster a collaborative, engineering-first culture focused on innovation and continuous improvement
-

What We're Looking For

Required Qualifications

Experience

- 7+ years of professional software engineering experience
- 5+ years of hands-on Python development experience
- 2+ years of technical leadership or lead engineering experience
- Proven experience building large-scale backend systems and distributed applications
- Experience working within Agile software development environments

Technical Expertise

Strong experience with:

- Python
- FastAPI, Django, or Flask
- SQLAlchemy or Django ORM
- REST APIs and GraphQL
- PostgreSQL or MySQL
- Redis
- Docker
- Git

Strong understanding of:

- Microservices architecture
- Distributed systems
- Object-Oriented Programming (OOP)
- Asynchronous programming (AsyncIO, Celery)

- Cloud-native application development
 - API security and authentication (OAuth2, JWT)
 - CI/CD pipelines and DevOps practices
 - Software architecture and design patterns
-

Preferred Qualifications

- Experience developing fintech, AI/ML, SaaS, blockchain, or enterprise software platforms
 - Experience with AWS, Azure, or Google Cloud Platform
 - Familiarity with Kubernetes, Terraform, and Infrastructure as Code
 - Experience with Kafka, RabbitMQ, Celery, or event-driven architectures
 - Knowledge of Elasticsearch, MongoDB, or vector databases
 - Experience integrating AI/ML services, data pipelines, or LLM-based applications
 - Contributions to open-source Python projects or active participation in the Python community
-

Technology Environment

Backend Technologies

Python • FastAPI • Django • Flask • SQLAlchemy • Celery

Cloud & Infrastructure

AWS • Azure • Google Cloud Platform • Docker • Kubernetes • Terraform

Databases & Messaging

PostgreSQL • MySQL • Redis • MongoDB • Kafka • RabbitMQ

DevOps & Observability

GitHub Actions • Jenkins • Prometheus • Grafana • OpenTelemetry

Testing & Quality

PyTest • Unittest • Playwright • SonarQube • CI/CD Pipelines

Tools & Collaboration

GitHub • Jira • Slack • Notion • Figma

Why Join Us

- ✨ Flexible remote, hybrid, and onsite work options
 - ✨ Full-time and part-time opportunities
 - ✨ Competitive compensation package
 - ✨ Opportunity to lead the development of scalable backend platforms powering innovative global businesses
 - ✨ Exposure to fintech, AI, blockchain, cloud-native technologies, and emerging technology initiatives
 - ✨ Collaborative, engineering-first culture focused on ownership, innovation, and technical excellence
 - ✨ Career advancement into Staff Engineer, Principal Engineer, Software Architect, Engineering Manager, or Director of Engineering
 - ✨ Strong investment in leadership development, continuous learning, open-source contributions, and technical innovation
-

Apply

If you are passionate about building scalable Python applications, leading high-performing engineering teams, and solving complex technical challenges with modern backend technologies, we'd love to connect with you.
