About The Copia Group

The Copia Group is an investment management firm partnering with innovative companies across fintech, digital infrastructure, enterprise software, and emerging technology sectors.

Through strategic investments and partnerships, we support the development of modern financial platforms, payment technologies, developer ecosystems, and scalable software solutions that serve businesses worldwide.

As we continue to expand our technology initiatives, we are seeking a Principal Software Engineer to help define technical strategy, drive architectural excellence, and lead the development of highly scalable software systems.

The Role

As a Principal Software Engineer, you will operate at the highest level of technical leadership within the organization.

You will be responsible for solving complex engineering challenges, defining architectural direction, influencing technical strategy across multiple teams, and helping scale mission-critical platforms that support business growth.

This role is highly cross-functional and combines hands-on engineering, technical vision, mentorship, and organizational leadership.

Responsibilities

Technical Strategy & Architecture

- Define and drive long-term architectural vision across multiple products and platforms
- Design highly scalable, secure, and resilient distributed systems
- Lead architecture reviews and major technical decision-making processes
- Establish engineering standards, design principles, and development best practices
- Evaluate emerging technologies and identify strategic opportunities for adoption

Engineering Leadership

- Influence technical direction across multiple engineering teams
- Serve as a trusted advisor to engineering leadership and executive stakeholders
- Lead large-scale technical initiatives from concept through execution
- Mentor Staff Engineers, Senior Engineers, and technical leaders
- Foster a culture of engineering excellence, innovation, and continuous improvement

Platform & Systems Development

- Drive the design and implementation of cloud-native applications and services
- Improve platform scalability, reliability, security, and operational performance
- Lead modernization initiatives across infrastructure, applications, and development workflows
- Support performance optimization and system resiliency efforts
- Champion observability, automation, and operational excellence practices

Cross-Functional Collaboration

- Partner with Product, Infrastructure, Security, Data, and Business teams
- Translate business objectives into scalable technical solutions
- Align technology investments with organizational priorities and growth strategies
- Communicate technical concepts effectively to both technical and non-technical audiences

Required Qualifications

Experience

- 10+ years of professional software engineering experience
- Proven track record designing and scaling complex software systems
- Experience leading architecture and technical strategy across multiple teams
- Strong background in distributed systems, cloud infrastructure, and enterprise software development
- Experience driving organization-wide engineering initiatives

Technical Expertise

Strong proficiency in one or more of the following:

- Java
- Python
- Go
- TypeScript
- C#
- Kotlin

Deep understanding of:

- Distributed systems architecture
- Microservices and event-driven architectures
- Cloud-native development
- API design and platform engineering
- Database architecture and optimization
- Security and reliability engineering
- Performance tuning and scalability
- CI/CD and DevOps practices

Leadership Skills

- Exceptional communication and stakeholder management abilities
- Strong mentorship and technical coaching experience
- Ability to influence engineering decisions without direct authority
- Strategic thinking with a strong execution mindset
- Proven ability to navigate ambiguity and solve complex business and technical problems

Preferred Qualifications

- Experience in fintech, payments, financial infrastructure, SaaS, or platform engineering
 - Familiarity with payment ecosystems and large-scale transaction processing
 - Experience building developer platforms and internal tooling
 - Experience with AI-powered applications, data-intensive systems, or infrastructure platforms
 - Experience supporting global-scale applications serving millions of users
 - Startup, scale-up, or high-growth technology company experience
-

Technology Environment

Languages

Java • Python • Go • TypeScript • Kotlin • .NET

Cloud & Infrastructure

AWS • Kubernetes • Docker • Terraform

Platform & Data

PostgreSQL • Redis • Kafka • Event-Driven Systems

Engineering Practices

Microservices • CI/CD • Infrastructure as Code • Observability

Tools & Collaboration

GitHub • Jira • Slack • Notion

Why Join Us

✨ Flexible remote, hybrid, and onsite work options

✨ Full-time and part-time opportunities

- ✦ Competitive compensation package
 - ✦ Principal-level ownership and influence
 - ✦ Opportunity to shape company-wide technology strategy
 - ✦ Exposure to innovative fintech and emerging technology initiatives
 - ✦ Collaborative and engineering-first culture
 - ✦ Long-term leadership and career growth opportunities
-

Apply

If you are passionate about solving large-scale engineering challenges, influencing technical strategy, and building systems that power the next generation of financial and technology platforms, we'd love to connect with you.
