

Senior Data Engineer

Data Platforms, Analytics Infrastructure & Scalable Systems

-  Remote / Hybrid / Onsite
 -  Full-Time or Part-Time
 -  The Copia Group, LLC
 -  Senior Level
-

About The Copia Group

The Copia Group is an investment management firm supporting innovative companies across fintech, digital infrastructure, commerce, and emerging technology sectors.

Through strategic investments and partnerships, we help advance the development of modern financial services, developer platforms, data-driven products, and scalable technology solutions used by businesses worldwide.

We are seeking an experienced **Senior Data Engineer** to design and build robust data platforms that enable analytics, operational intelligence, and informed decision-making across complex business environments.

The Opportunity

As a Senior Data Engineer, you will play a critical role in architecting and scaling data infrastructure that powers reporting, analytics, machine learning initiatives, and business operations.

You will collaborate closely with software engineers, data analysts, product teams, and stakeholders to build reliable data pipelines, optimize data systems, and ensure high standards for data quality and accessibility.

This role offers significant technical ownership and the opportunity to shape the future of data engineering within a growing technology ecosystem.

What You'll Do

Data Platform Engineering

- Design, build, and maintain scalable data pipelines and ETL/ELT workflows
- Develop and optimize data models that support analytical and operational use cases
- Integrate data from multiple internal and external sources into centralized platforms
- Ensure the availability, integrity, and consistency of business-critical datasets
- Implement data processing solutions capable of handling large-scale workloads

Data Architecture & Infrastructure

- Contribute to the design and evolution of modern data architectures
- Build and maintain cloud-based data warehouses and lakehouse environments
- Optimize data storage, transformation, and retrieval processes
- Establish standards for data governance, documentation, and lineage
- Improve platform scalability, reliability, and performance

Collaboration & Analytics Enablement

- Partner with Data Analysts, Product Managers, and Engineering teams to understand data requirements
- Support reporting, dashboarding, and business intelligence initiatives
- Enable self-service analytics capabilities through well-structured datasets
- Provide guidance on best practices for data management and usage
- Translate complex technical concepts into actionable business insights

Quality & Operational Excellence

- Implement automated validation and monitoring processes for data pipelines
 - Identify and resolve data quality issues proactively
 - Participate in incident response and root cause analysis activities
 - Contribute to CI/CD practices and infrastructure automation initiatives
 - Promote engineering excellence through documentation and knowledge sharing
-

What We're Looking For

Required Qualifications

Experience

- 5+ years of professional experience in data engineering or related fields
- Proven experience building and maintaining production-grade data pipelines
- Strong understanding of modern data architecture principles
- Experience supporting large-scale analytical environments

Technical Expertise

Strong experience with:

- SQL and advanced database concepts
- Python for data engineering applications
- ETL/ELT pipeline development
- Data modeling and schema design
- Workflow orchestration tools
- Data warehousing concepts
- Batch and stream processing methodologies
- Performance optimization and troubleshooting

Strong understanding of:

- Data governance and quality practices
 - Cloud-based data platforms
 - Distributed data processing systems
 - Security and privacy considerations for data systems
 - Software engineering best practices within data environments
-

Preferred Qualifications

- Experience working in fintech, payments, investment management, or SaaS environments
 - Familiarity with transaction data, financial reporting, or operational analytics
 - Experience with Snowflake, BigQuery, Redshift, or Databricks
 - Experience with Apache Spark, Kafka, or other distributed data technologies
 - Experience supporting machine learning workflows and feature engineering pipelines
 - Experience working in startup or high-growth technology environments
-

Technology Environment

Programming & Processing

Python • SQL • Apache Spark • PySpark

Data Platforms

Snowflake • Databricks • BigQuery • Amazon Redshift

Orchestration & Streaming

Airflow • Kafka • dbt

Cloud & Infrastructure

AWS • Azure • GCP • Docker • CI/CD

Visualization & Collaboration

Looker • Tableau • GitHub • Jira • Slack • Notion

Why Join Us

- ✨ Flexible remote, hybrid, and onsite work options
- ✨ Full-time and part-time opportunities
- ✨ Competitive compensation package

- ✨ Opportunity to build and scale modern data platforms
 - ✨ Exposure to innovative fintech and emerging technology initiatives
 - ✨ Collaborative and data-driven culture
 - ✨ Career advancement and technical leadership opportunities
 - ✨ Strong investment in continuous learning and professional growth
-

Apply

If you are passionate about building scalable data systems, enabling data-driven decision-making, and solving complex engineering challenges, we'd love to connect with you.
