

Senior Full Stack Web3 Engineer – Fintech/Payments

Company: Copia Group, LLC

Location: Australia / Remote

Employment Type: Full-Time

Department: Engineering

Level: Senior

Focus: Web3 · Fintech · Payments · Blockchain · EVM

About Copia Group

Copia Group is building a next-generation **Web3 fintech and payments platform — essentially “Stripe for Web3.”**

Our goal is to make blockchain-based payments and financial infrastructure easier, faster, and more accessible for businesses and users. As we expand internationally, including our Australia operations, we are building a strong engineering team to develop secure, scalable, production-ready Web3 infrastructure.

We are looking for a **Senior Full Stack Web3 Engineer** who can work across smart contracts, backend services, APIs, and modern frontend applications.

About the Role

As a Senior Full Stack Web3 Engineer, you will be responsible for designing and building core components of our Web3 fintech and payments platform.

You will work across the entire technology stack — from **Solidity smart contracts and blockchain integrations to backend APIs and frontend applications.**

This is a hands-on engineering role for someone who understands both traditional software engineering and decentralized technologies.

You will collaborate closely with product, engineering, and infrastructure teams to build reliable payment and financial workflows on blockchain networks.

Key Responsibilities

- Design, develop, test, and deploy production-grade **Web3 applications and payment infrastructure**.
- Develop and maintain **Solidity smart contracts** and supporting blockchain services.
- Build secure and scalable backend services using technologies such as **Node.js, TypeScript, Go, or Java**.
- Develop modern frontend applications using **React, Next.js, or similar frameworks**.
- Integrate blockchain networks, wallets, smart contracts, exchanges, payment providers, and external APIs.
- Build APIs and services connecting Web3 infrastructure with traditional fintech systems.
- Design transaction, payment, settlement, wallet, and token-related workflows.
- Work with **EVM-compatible networks**, including Ethereum and Layer 2 ecosystems.
- Implement smart-contract testing, security testing, monitoring, and deployment automation.
- Work with blockchain indexing and data infrastructure where required.
- Collaborate with DevOps engineers to deploy and operate production systems.
- Participate in architecture decisions and technical design reviews.
- Identify performance, scalability, and security issues and implement appropriate solutions.
- Write clean, maintainable, well-tested production code.
- Review code and provide technical guidance to other engineers.
- Contribute to engineering standards, documentation, CI/CD, and development processes.

Required Qualifications

- **5+ years of professional software engineering experience.**
- Strong experience developing **full-stack applications**.
- Professional experience with **Web3/blockchain development**.
- Strong hands-on experience with **JavaScript/TypeScript**.
- Strong backend development experience with **Node.js, Go, Java, or similar**.
- Strong frontend experience with **React, Next.js, or equivalent**.
- Practical experience with **Solidity and smart contract development**.
- Strong understanding of **Ethereum and EVM architecture**.
- Experience integrating smart contracts using **ethers.js, viem, web3.js, or similar libraries**.
- Experience building and consuming **REST APIs and/or GraphQL APIs**.
- Strong understanding of databases such as **PostgreSQL, MySQL, or MongoDB**.
- Experience with Git and modern software development workflows.
- Understanding of software security and secure coding practices.
- Experience writing automated tests and maintaining production-quality code.

Fintech / Payments Experience

Experience in fintech, payments, digital assets, or financial infrastructure is highly preferred.

Candidates with experience in any of the following areas are particularly valuable:

- Blockchain payments
- Payment gateways
- Stablecoins
- Tokenized payments
- Wallet infrastructure
- Digital asset payments
- Settlement systems
- Transaction processing
- Merchant payments
- On-chain/off-chain payment systems
- DeFi protocols
- Exchanges
- Tokenization
- RWA infrastructure
- KYC/AML integrations
- Payment APIs
- Financial APIs
- Fee abstraction
- Account abstraction

Web3 Technical Experience

Strong candidates may have experience with:

Blockchain

- Ethereum
- Polygon
- Arbitrum
- Optimism
- Base
- BNB Chain
- Other EVM-compatible networks

Smart Contracts

- Solidity
- OpenZeppelin

- Hardhat
- Foundry
- ERC-20
- ERC-721
- ERC-1155
- Upgradeable contracts
- Proxy patterns
- Contract security

Web3 Integration

- ethers.js
- viem
- wagmi
- WalletConnect
- MetaMask
- The Graph
- Chainlink
- Blockchain RPC providers

Backend & Infrastructure

Experience with some of the following is preferred:

- Node.js
- TypeScript
- Go
- Java
- REST
- GraphQL
- PostgreSQL
- Redis
- Docker
- Kubernetes
- AWS / GCP / Azure
- GitHub Actions
- CI/CD
- Microservices
- Event-driven architecture
- Message queues
- Monitoring and observability

Frontend

Experience with:

- React
- Next.js
- TypeScript
- Modern state management
- Web3 wallet integration
- Responsive application development
- API integration
- Real-time applications
- Secure authentication and authorization

Security & Reliability

Because we are building financial infrastructure, security and reliability are critical.

You should have a strong understanding of:

- Smart contract security
- Blockchain transaction lifecycle
- Private key and wallet security
- Authentication and authorization
- API security
- Secure coding practices
- Transaction validation
- Reentrancy and common smart-contract vulnerabilities
- Gas optimization
- Monitoring and incident response
- Production system reliability

Nice to Have

- Experience building **payment infrastructure**.
- Experience with **stablecoins or tokenized fiat**.
- Experience with **USDC, USDT, or similar assets**.
- Experience with account abstraction / ERC-4337.
- Experience with Layer 2 networks and rollups.
- Experience with Chainlink oracles.
- Experience with RWA/tokenization platforms.
- Experience with DeFi protocols or DEX integrations.
- Experience with KYC/AML systems.

- Experience working with regulated financial products.
- Experience with blockchain indexing infrastructure.
- Experience with Kubernetes and cloud-native architecture.
- Open-source Web3 contributions or public GitHub projects.
- Previous startup or high-growth technology company experience.

What We're Looking For

We are looking for someone who is more than just a Web3 developer.

The ideal candidate is a **strong software engineer who understands blockchain deeply** and can move comfortably between:

Frontend → Backend → APIs → Smart Contracts → Blockchain → Payments

You should be comfortable taking ownership of a feature from architecture through production deployment.

We value engineers who:

- Think about security first.
- Understand systems rather than only individual technologies.
- Can make practical architectural decisions.
- Write maintainable production code.
- Are comfortable working independently.
- Communicate clearly with technical and non-technical teams.
- Enjoy solving difficult problems at the intersection of **fintech and Web3**.
- Are excited about building infrastructure rather than simply integrating existing products.

Why Join Copia Group?

- Build a **Web3 fintech/payments platform from the ground up**.
- Work on infrastructure comparable in ambition to **“Stripe for Web3.”**
- Solve real problems at the intersection of payments, blockchain, and financial technology.
- Work with modern blockchain and cloud technologies.
- Have significant technical ownership and influence over architecture.
- Work with an internationally focused engineering team.
- Opportunity to contribute to the company's international expansion, including Australia.
- Work on products designed for real-world adoption rather than experimental blockchain projects.

Application

If you are an experienced full-stack engineer with strong Web3 knowledge and are excited about building the next generation of blockchain-based payment infrastructure, we'd like to hear from you.
