

Senior Product Designer / UX/UI Design Lead — Web3 Payments

Location: Australia / Remote

Employment Type: Full-time

Department: Product & Design

Level: Senior / Lead

About Copia Group

Copia Group is building a **Web3 fintech and payments platform — essentially “Stripe for Web3.”**

Our goal is to make blockchain-based payments and financial products feel as simple, intuitive, and trustworthy as the best modern fintech products. As we expand internationally, including our planned Australia presence, we're looking for a senior product designer who can help shape the user experience from the ground up.

About the Role

We're looking for a **Senior Product Designer / UX/UI Design Lead** to own the design experience across our Web3 payments platform.

You'll work closely with Product, Engineering, Business Development, and leadership to turn complex blockchain and financial workflows into **simple, intuitive, and user-friendly experiences**.

This is a hands-on leadership role. You'll have significant ownership over product discovery, UX strategy, design systems, prototyping, and the final product experience.

Key Responsibilities

- Own UX/UI design across key products and payment experiences.
- Translate complex **Web3, blockchain, and fintech concepts** into simple user experiences.
- Lead the design process from **research → discovery → wireframes → prototypes → UI → production**.
- Work closely with Product Managers and Engineers to define product requirements and user journeys.
- Conduct user research, interviews, usability testing, and competitive analysis.
- Create high-fidelity prototypes and production-ready designs in **Figma**.

- Build and evolve a scalable **design system** across web and mobile products.
- Establish UX standards and design principles for the organization.
- Collaborate with engineering teams to ensure designs are implemented accurately.
- Use product analytics and user feedback to continuously improve the experience.
- Mentor and provide design direction to other designers as the team grows.
- Contribute to product strategy and roadmap discussions.
- Help define the UX vision for Copia's Web3 payments ecosystem.

What We're Looking For

- **6+ years of experience** in UX/UI, Product Design, or a related field.
- Strong experience designing **complex digital products**, ideally fintech, payments, SaaS, Web3, or financial applications.
- Experience taking products from **0 → 1**.
- Strong understanding of UX research, interaction design, information architecture, and visual design.
- Excellent proficiency with **Figma** and modern design workflows.
- Experience creating and maintaining design systems.
- Strong understanding of responsive web and mobile design.
- Ability to communicate design decisions clearly to technical and non-technical stakeholders.
- Experience collaborating closely with engineering and product teams.
- Strong product thinking and ability to balance **user needs, business objectives, and technical constraints**.
- Comfortable working in a fast-moving startup environment.

Web3 / Fintech Experience

Web3 experience is **strongly preferred**, particularly experience with:

- Crypto wallets and onboarding
- Blockchain applications / DApps
- DeFi
- Tokenization
- Stablecoins
- Web3 payments
- Trading or financial products
- Blockchain-based identity
- Crypto exchanges
- On-chain transactions

You don't need to be a blockchain engineer, but you should be comfortable understanding blockchain concepts and translating technical complexity into an excellent user experience.

Nice to Have

- Experience leading or mentoring designers.
- Experience working on **payments or financial infrastructure**.
- Experience designing products for international markets.
- Experience with Web3 wallet UX and transaction flows.
- Experience with design analytics and experimentation.
- Experience working with engineering teams on design systems and component libraries.
- Startup or 0→1 product experience.

What You'll Own

You will have ownership of:

Product UX → Design System → User Journeys → Prototypes → UI → Design Quality → Continuous UX Improvement

You'll play an important role in defining how users interact with Copia's "**Stripe for Web3**" platform.

Why Join Copia Group?

- Build a product at the intersection of **Fintech, Payments, and Web3**.
- Significant ownership and influence over product direction.
- Work on a **0→1 platform** rather than simply maintaining an existing product.
- Collaborate directly with product, engineering, and leadership teams.
- Opportunity to help define the UX standards for a new generation of Web3 financial products.
- International growth with **Australia expansion**.
- Opportunity to grow into a broader **Design Leadership / Head of Product Design** position as the organization scales.

Success in the First 6 Months

You will have:

- Established the core UX principles for the platform.
- Designed key payment and onboarding journeys.
- Created or strengthened the company's design system.
- Established a repeatable research and design process.
- Worked closely with engineering to bring designs into production.
- Improved the usability of complex Web3 payment workflows.
- Helped define the product experience and design roadmap for future releases.

Ideal candidate: A senior product designer who can combine **strong UX craft, product thinking, Web3 understanding, and design leadership** to make complex financial technology feel remarkably simple.
