

Senior QA Automation Engineer – Web3 / Fintech

Location: Australia / Remote

Employment Type: Full-time

Department: Engineering / Quality Assurance

Level: Senior

About Copia Group

Copia Group is building a **Web3 fintech and payments platform — essentially “Stripe for Web3.”**

We're focused on making blockchain payments and financial infrastructure secure, reliable, scalable, and as easy to use as modern fintech products.

As we expand internationally, including our planned Australia presence, we're looking for a **Senior QA Automation Engineer** to help establish a high-quality engineering and testing culture across our Web3 platform.

About the Role

We're looking for a **Senior QA Automation Engineer** with strong experience in automation, API testing, distributed systems, and modern software quality practices.

You'll work closely with Backend, Frontend, Blockchain, DevOps, and Product teams to design and implement automated testing strategies for **Web3 payments, APIs, smart-contract integrations, wallets, and financial workflows**.

This is a hands-on role with significant ownership over our automation framework, testing infrastructure, CI/CD quality gates, and overall product reliability.

Key Responsibilities

- Design and maintain a comprehensive **automated testing strategy** across Web3 and fintech products.
- Build and maintain scalable **UI, API, integration, and end-to-end automation frameworks**.

- Test blockchain-related workflows including wallets, transactions, token transfers, payment flows, and blockchain integrations.
- Develop automated regression, smoke, integration, and system tests.
- Validate REST APIs, WebSocket services, microservices, and backend systems.
- Test interactions between traditional Web2 services and blockchain infrastructure.
- Integrate automated testing into **CI/CD pipelines**.
- Establish quality gates and automated release validation.
- Identify, reproduce, investigate, and document complex defects.
- Work closely with developers to perform root-cause analysis.
- Validate application behavior under different network and transaction conditions.
- Build test environments and test data strategies for automated testing.
- Monitor test stability and reduce flaky tests.
- Participate in architecture and product discussions from a quality perspective.
- Define QA standards, processes, and best practices as the engineering organization grows.
- Mentor other QA engineers and contribute to the development of the QA automation function.

Web3 Testing Responsibilities

You will help test areas such as:

- Blockchain transactions
- Wallet connections and authentication
- Token transfers
- ERC-20 / ERC-721 / ERC-1155 workflows
- Smart-contract integrations
- Gas and transaction handling
- Blockchain confirmations and failures
- RPC/API integrations
- Multi-chain workflows
- Payment settlement
- Stablecoin transactions
- On-chain/off-chain data consistency
- Web3 authentication and signing
- Transaction security and edge cases

Experience testing **Ethereum/EVM-based systems** is highly valuable.

Required Qualifications

- **5+ years of experience** in QA, Software Testing, SDET, or Test Automation.
- Strong experience building **automation frameworks from the ground up**.

- Strong programming experience with **Python, Java, JavaScript/TypeScript, or similar**.
- Strong experience with API automation and testing.
- Experience with **Selenium, Playwright, Cypress, or equivalent**.
- Strong understanding of automated testing methodologies.
- Experience testing distributed systems and microservices.
- Strong knowledge of **REST APIs, HTTP, JSON, databases, and Web services**.
- Experience with Git and modern CI/CD practices.
- Experience working in Agile/Scrum engineering teams.
- Strong debugging and analytical skills.
- Ability to work independently and take ownership of quality initiatives.

Web3 / Blockchain Experience

Strongly preferred:

- Professional experience testing **blockchain or Web3 applications**.
- Understanding of Ethereum and EVM architecture.
- Experience with Web3.js, ethers.js, or similar libraries.
- Experience testing smart-contract interactions.
- Experience with Hardhat, Foundry, Ganache, or similar blockchain development/testing tools.
- Understanding of wallets, private/public keys, signatures, gas, RPCs, and transaction lifecycle.
- Experience testing DeFi, crypto payments, exchanges, wallets, or DApps.

Fintech / Payments Experience

Experience with financial products is also highly valuable, including:

- Payment processing
- Transaction systems
- Banking APIs
- Payment gateways
- Digital wallets
- Settlement systems
- Financial reconciliation
- Fraud/security testing
- High-volume transaction platforms

Automation & Technology

Depending on your background, you may work with technologies such as:

Languages:

Python · Java · JavaScript · TypeScript

Automation:

Playwright · Selenium · Cypress · Appium

API Testing:

Postman · REST Assured · pytest · Supertest

Web3:

ethers.js · Web3.js · Hardhat · Foundry · EVM

CI/CD:

GitHub Actions · GitLab CI · Jenkins

Infrastructure:

Docker · Kubernetes · AWS

Databases:

PostgreSQL · MySQL · MongoDB · Redis

Observability:

Grafana · Prometheus · ELK · CloudWatch

You don't need experience with every technology listed.

Nice to Have

- Experience with **performance/load testing**.
- Experience with JMeter, k6, Locust, or similar tools.
- Experience testing high-throughput distributed systems.
- Security testing experience.
- Smart-contract testing experience.
- Experience with AWS or other cloud platforms.
- Kubernetes/Docker experience.
- Experience designing QA infrastructure.
- Experience leading or mentoring QA engineers.
- Experience working in a startup or 0→1 environment.

What You'll Own

You will have ownership across:

Test Strategy → Automation Framework → API Testing → Web3 Testing → CI/CD Quality Gates → Regression → Release Quality → Production Reliability

You'll be one of the key engineers responsible for making sure Copia's "**Stripe for Web3**" platform is reliable and production-ready.

First 6 Months

Success in the first six months will include:

- Establishing the core automated testing architecture.
- Building reliable UI/API/E2E test coverage.
- Automating critical Web3 payment and transaction flows.
- Integrating automated testing into CI/CD.
- Reducing manual regression testing.
- Establishing quality gates for production releases.
- Improving test reliability and reducing flaky tests.
- Creating a scalable QA strategy for future products and blockchain integrations.

Why Join Copia Group?

- Build quality infrastructure for a **Web3 fintech/payments platform**.
- Work at the intersection of **blockchain, payments, and financial technology**.
- Have significant ownership over QA automation and engineering quality.
- Work on a **0→1 product** rather than simply maintaining legacy systems.
- Collaborate with experienced engineering, product, DevOps, and blockchain teams.
- Contribute to an international product with **Australia expansion**.
- Opportunity to grow into **QA Lead / Quality Engineering Lead** as the organization scales.

Ideal Candidate

A strong candidate is not simply someone who can write Selenium tests. We're looking for a **Senior QA/SDET who thinks like an engineer** — someone capable of designing automation architecture, understanding distributed systems, testing blockchain transactions, finding difficult edge cases, and building quality into the product from the beginning.
