

Senior Software Engineer (Elixir)

Distributed Systems, Real-Time Applications & Scalable Backend Platforms

-  Remote / Hybrid / Onsite
 -  Full-Time or Part-Time
 -  The Copia Group, LLC
 -  Senior Level
-

About The Copia Group

The Copia Group is an investment management firm supporting innovative companies across fintech, digital infrastructure, AI, blockchain, and emerging technology sectors.

Through strategic investments and partnerships, we help accelerate the growth of technology-driven businesses building scalable software platforms, developer tools, and modern digital products. Our portfolio companies rely on resilient backend systems and real-time technologies to deliver reliable experiences at global scale.

We are seeking an experienced **Senior Software Engineer (Elixir)** to build high-performance, fault-tolerant systems using Elixir, OTP, and modern cloud technologies.

The Opportunity

As a Senior Software Engineer, you will design and develop distributed backend services, real-time applications, and highly scalable systems using Elixir and the BEAM ecosystem. You'll

collaborate with Product Managers, Frontend Engineers, DevOps teams, and Architects to deliver secure and reliable software solutions that support mission-critical business operations.

This role offers significant technical ownership, opportunities to influence system architecture, and the chance to mentor engineers while advancing engineering excellence across multiple products.

What You'll Do

Backend Development

- Design, develop, and maintain scalable backend applications using Elixir and Phoenix
- Build high-performance APIs, microservices, and real-time communication systems
- Develop fault-tolerant distributed services leveraging OTP principles
- Write clean, maintainable, and well-tested production code
- Troubleshoot complex production issues and optimize system performance

Distributed Systems Engineering

- Design resilient systems capable of handling large-scale concurrent workloads
- Build event-driven architectures and asynchronous processing pipelines
- Implement messaging systems, background job processing, and workflow automation
- Optimize application scalability, reliability, and operational efficiency
- Ensure high availability and fault tolerance across distributed environments

Architecture & Technical Excellence

- Contribute to software architecture and long-term technical strategy
- Conduct code reviews and establish engineering best practices
- Improve development workflows, testing frameworks, and CI/CD processes
- Promote secure coding standards and operational excellence
- Drive modernization efforts and continuous technical improvements

Collaboration & Mentorship

- Partner with Product Managers to deliver business-critical features
- Work closely with DevOps and Infrastructure teams on cloud deployments
- Mentor junior engineers through code reviews and technical guidance
- Participate in sprint planning, technical discussions, and architectural reviews
- Foster a collaborative, innovation-focused engineering culture

What We're Looking For

Required Qualifications

Experience

- 5+ years of professional software engineering experience
- 3+ years of hands-on experience with Elixir in production environments
- Proven experience building scalable backend systems and distributed applications
- Experience working within Agile development teams

Technical Expertise

Strong experience with:

- Elixir
- Phoenix Framework
- OTP
- Ecto
- PostgreSQL
- REST APIs and GraphQL
- Redis
- Docker
- Git

Strong understanding of:

- Distributed systems architecture
 - Concurrency and fault-tolerant design
 - Event-driven systems
 - Real-time applications and WebSockets
 - Background job processing
 - Cloud-native development
 - Secure software engineering practices
 - Testing and continuous integration methodologies
-

Preferred Qualifications

- Experience working in fintech, SaaS, messaging platforms, or real-time systems
 - Familiarity with Phoenix LiveView and modern frontend integrations
 - Experience with RabbitMQ, Kafka, NATS, or event-streaming platforms
 - Experience deploying applications on AWS, Kubernetes, or containerized environments
 - Knowledge of observability tools including Prometheus, Grafana, and OpenTelemetry
 - Contributions to open-source Elixir or Erlang ecosystem projects
-

Technology Environment

Backend Technologies

Elixir • Phoenix • OTP • Ecto • LiveView • GraphQL

Databases & Messaging

PostgreSQL • Redis • RabbitMQ • Kafka • NATS

Cloud & Infrastructure

AWS • Docker • Kubernetes • Terraform • GitHub Actions

Observability & Monitoring

Prometheus • Grafana • OpenTelemetry • Datadog

Testing & Quality

ExUnit • Dialyzer • CI/CD Pipelines

Tools & Collaboration

GitHub • Jira • Slack • Notion • Figma

Why Join Us

- ✦ Flexible remote, hybrid, and onsite work options
 - ✦ Full-time and part-time opportunities
 - ✦ Competitive compensation package
 - ✦ Opportunity to build highly scalable, real-time, and distributed systems
 - ✦ Exposure to innovative fintech, AI, blockchain, and emerging technology initiatives
 - ✦ Collaborative, engineering-first culture focused on ownership and technical excellence
 - ✦ Career advancement into Lead Engineer, Staff Engineer, or Software Architecture roles
 - ✦ Strong investment in mentorship, continuous learning, and open-source innovation
-

Apply

If you are passionate about Elixir, distributed systems, and building resilient software platforms that operate at scale, we'd love to connect with you.
