

Senior Web3 Frontend / DApp Engineer

Location: Australia / Remote

Employment Type: Full-time

Department: Engineering

Level: Senior

About Copia Group

Copia Group is building a **Web3 fintech and payments platform — essentially “Stripe for Web3.”**

Our mission is to make blockchain payments and financial products as simple, reliable, and intuitive as modern fintech applications.

As we expand internationally, including our planned Australia presence, we're looking for a **Senior Web3 Frontend / DApp Engineer** to help build the user-facing layer of our Web3 payments ecosystem.

About the Role

We're looking for a senior frontend engineer who combines **strong React/TypeScript skills with hands-on Web3 experience.**

You'll build production-grade DApps and user experiences that interact directly with blockchain networks, smart contracts, wallets, and payment infrastructure.

You'll work closely with **Product Designers, Backend Engineers, Smart Contract Engineers, and DevOps/Infrastructure teams** to turn complex blockchain functionality into simple, fast, and secure user experiences.

This is a hands-on role with significant ownership over frontend architecture and the Web3 user experience.

Key Responsibilities

- Build and maintain production-grade **Web3 applications and DApps.**
- Develop modern frontend applications using **React and TypeScript.**
- Integrate wallets, smart contracts, blockchain networks, and Web3 APIs.
- Build intuitive flows for **payments, transactions, deposits, withdrawals, and wallet interactions.**

- Design robust transaction-state handling, including pending, confirmed, failed, and rejected transactions.
- Integrate and interact with **EVM-compatible smart contracts**.
- Build reusable frontend components and Web3 interaction libraries.
- Work closely with smart-contract engineers to integrate contract interfaces safely.
- Implement responsive interfaces based on Figma designs.
- Optimize frontend performance and application scalability.
- Implement secure wallet connection and transaction-signing flows.
- Handle blockchain-specific UX challenges such as gas estimation, network switching, confirmations, and transaction failures.
- Write unit, integration, and end-to-end tests.
- Participate in frontend architecture and technical design decisions.
- Contribute to CI/CD and production deployment workflows.
- Monitor and troubleshoot frontend and Web3 production issues.
- Help establish frontend engineering standards and best practices.
- Mentor junior and mid-level engineers as the team grows.

Web3 Responsibilities

You'll work directly with technologies and concepts including:

- Ethereum and EVM-compatible networks
- Smart-contract interaction
- Wallet connectivity
- Token transfers
- ERC-20 / ERC-721 / ERC-1155
- Stablecoins
- On-chain transactions
- Gas estimation and optimization
- Transaction signing
- RPC providers
- Blockchain indexing
- Web3 authentication
- Multi-chain applications
- DeFi and payment workflows

Required Qualifications

- **5+ years of professional frontend/software engineering experience.**
- **2+ years of hands-on Web3/blockchain development experience preferred.**
- Strong **React and TypeScript** experience.
- Strong JavaScript/TypeScript fundamentals.
- Experience building production web applications.

- Hands-on experience integrating **wallets and smart contracts**.
- Experience with **ethers.js, viem, Web3.js, or equivalent**.
- Understanding of Ethereum/EVM architecture.
- Experience working with REST APIs and backend services.
- Strong understanding of frontend architecture and state management.
- Experience with Git and modern development workflows.
- Experience writing automated tests.
- Strong understanding of responsive web development.
- Ability to work closely with product, design, backend, and blockchain engineers.

Web3 Technology Experience

Experience with some of the following is highly valuable:

Frontend

- React
- Next.js
- TypeScript
- Tailwind CSS
- Redux / Zustand / similar state-management tools

Web3

- ethers.js
- viem
- Web3.js
- wagmi
- WalletConnect
- MetaMask
- Coinbase Wallet
- EVM networks

Smart Contracts

- Solidity
- ABI integration
- Hardhat
- Foundry

Infrastructure

- Docker
- AWS
- Vercel

- GitHub Actions
- CI/CD

You don't need to know every technology listed.

Fintech / Payments Experience

Experience building financial or payment products is a strong advantage.

Particularly valuable experience includes:

- Payment gateways
- Digital wallets
- Stablecoin payments
- Crypto payments
- Checkout experiences
- Transaction processing
- Financial dashboards
- Exchanges
- DeFi applications
- Banking or fintech products

Security & Reliability

Because the platform handles financial transactions, you'll be expected to take security and reliability seriously.

You should understand:

- Secure wallet interactions
- Transaction signing
- Authentication
- Input validation
- Frontend security
- Smart-contract interaction risks
- RPC failures
- Transaction replay/duplicate handling
- Network failures
- Safe handling of sensitive data

You won't be responsible for smart-contract security alone, but you'll work closely with our blockchain engineers to ensure the frontend interacts with contracts safely.

Nice to Have

- Experience with **Solidity**.
- Experience building DApps from 0 → 1.
- Multi-chain development experience.
- Experience with Layer 2 networks.
- Experience with stablecoins and payments.
- Experience with DeFi.
- Experience with blockchain indexing solutions.
- Experience with GraphQL.
- Experience with WebSockets/realtime applications.
- Experience with performance optimization.
- Open-source Web3 contributions.
- Experience mentoring engineers.
- Startup experience.

What You'll Own

Frontend Architecture → DApp Development → Wallet Integration → Smart Contract Integration → Transaction UX → Testing → Performance → Production Reliability

You'll play a central role in defining how users interact with Copia's "**Stripe for Web3**" platform.

First 6 Months

You will be expected to:

- Establish a scalable frontend architecture.
- Build core Web3 payment and wallet experiences.
- Integrate smart contracts and blockchain networks.
- Implement robust transaction-state management.
- Build reusable Web3 frontend components.
- Establish automated frontend and DApp testing.
- Improve performance and reliability.
- Work with Product and Design to simplify complex blockchain workflows.
- Help establish frontend engineering standards for the growing team.

Why Join Copia Group?

- Build at the intersection of **Web3, fintech, and payments**.
- Work on a **0→1 product** with significant technical ownership.
- Help create a platform designed to make Web3 payments as simple as modern fintech.

- Work closely with blockchain, backend, DevOps, product, and design teams.
- International growth with **Australia expansion**.
- Opportunity to grow into **Lead Frontend Engineer / Web3 Engineering Lead** as the team scales.

Ideal Candidate

We're looking for someone who is more than a traditional React developer.

The ideal candidate is a **strong frontend engineer who genuinely understands Web3** — someone who can connect wallets, interact with smart contracts, reason about blockchain transactions, handle the unique UX challenges of crypto, and still build a frontend that feels as polished and simple as a modern fintech application.
