

Senior Web3 Full Stack Engineer

Decentralized Applications, Blockchain Infrastructure & Digital Asset Platforms

-  Remote / Hybrid / Onsite
 -  Full-Time or Part-Time
 -  The Copia Group, LLC
 -  Senior Level
-

About The Copia Group

The Copia Group is an investment management firm supporting innovative companies across fintech, blockchain, digital infrastructure, and emerging technology sectors.

Through strategic investments and partnerships, we help advance the development of decentralized technologies, digital asset ecosystems, developer platforms, and next-generation financial applications shaping the future of commerce and ownership.

We are seeking an experienced **Senior Web3 Full Stack Engineer** to build scalable decentralized applications and blockchain-powered experiences that bridge traditional software engineering with emerging Web3 technologies.

The Opportunity

As a Senior Web3 Full Stack Engineer, you will design, develop, and deliver end-to-end applications that integrate modern frontend experiences with secure backend services and blockchain infrastructure.

You will collaborate closely with product leaders, designers, blockchain engineers, and cross-functional stakeholders to create innovative solutions across wallets, decentralized applications (dApps), smart contract integrations, and digital asset ecosystems.

This role offers significant technical ownership, opportunities to influence architectural decisions, and the chance to help shape the next generation of Web3 products.

What You'll Do

Full Stack Development

- Design, develop, and maintain full stack applications supporting Web3 products and services
- Build responsive and intuitive user interfaces for decentralized applications
- Develop backend services, APIs, and integrations that support blockchain interactions
- Implement wallet connectivity and authentication workflows
- Deliver clean, maintainable, and production-ready code across frontend and backend systems

Web3 & Blockchain Integration

- Integrate applications with blockchain networks and smart contracts
- Develop features involving token transactions, NFT interactions, staking mechanisms, and on-chain data
- Collaborate with blockchain engineers to support decentralized infrastructure initiatives
- Build tools and services that improve the usability and accessibility of Web3 products
- Monitor emerging technologies and contribute to technical innovation efforts

Architecture & Platform Engineering

- Design scalable application architectures supporting high-growth products
- Optimize performance, security, and reliability across the technology stack
- Participate in architectural reviews and technical planning sessions
- Improve observability, testing strategies, and deployment processes

- Support cloud-native and distributed application initiatives

Collaboration & Leadership

- Partner closely with Product Managers, Designers, Blockchain Engineers, and QA teams
 - Mentor engineers through technical guidance and code reviews
 - Lead technical initiatives from concept through deployment
 - Promote engineering best practices and continuous improvement
 - Contribute to a collaborative and knowledge-sharing culture
-

What We're Looking For

Required Qualifications

Experience

- 5+ years of professional software engineering experience
- 2+ years of experience building Web3 applications or blockchain-integrated products
- Proven experience delivering full stack applications in production environments
- Strong understanding of modern software development methodologies

Technical Expertise

Strong experience with:

Frontend Development

- React
- TypeScript
- Next.js
- HTML5 / CSS3
- State management libraries

Backend Development

- Node.js
- Express.js or NestJS
- REST APIs and GraphQL
- Database design and optimization

Web3 Development

- ethers.js or viem
- Wallet integrations (MetaMask, WalletConnect)
- Smart contract interaction patterns
- Blockchain data indexing concepts
- Ethereum and EVM-based ecosystems

Strong understanding of:

- Decentralized application architecture
 - Authentication and authorization models
 - Smart contract security considerations
 - Distributed systems principles
 - Cloud-native deployment practices
 - Performance optimization and scalability
-

Preferred Qualifications

- Experience developing smart contracts using Solidity
 - Experience with Layer 2 networks such as Arbitrum, Optimism, Base, or Polygon
 - Familiarity with DeFi protocols, NFT ecosystems, or tokenized applications
 - Experience using The Graph, Alchemy, Infura, or other Web3 infrastructure providers
 - Experience with AWS, Docker, Kubernetes, and CI/CD pipelines
 - Contributions to open-source Web3 projects or blockchain communities
-

Technology Environment

Frontend

React • TypeScript • Next.js • Tailwind CSS

Backend

Node.js • NestJS • Express.js • GraphQL • REST APIs

Web3 Stack

Solidity • ethers.js • viem • MetaMask • WalletConnect

Blockchain Ecosystems

Ethereum • Base • Arbitrum • Optimism • Polygon

Cloud & Infrastructure

AWS • Docker • Kubernetes • GitHub Actions • CI/CD

Database & Messaging

PostgreSQL • Redis • MongoDB • Kafka

Tools & Collaboration

GitHub • Jira • Slack • Notion • Figma

Why Join Us

- ✦ Flexible remote, hybrid, and onsite work options
 - ✦ Full-time and part-time opportunities
 - ✦ Competitive compensation package
 - ✦ Opportunity to build innovative Web3 products with real-world impact
 - ✦ Exposure to cutting-edge blockchain and digital asset initiatives
 - ✦ Collaborative and engineering-first culture
 - ✦ Career advancement and technical leadership opportunities
 - ✦ Strong emphasis on ownership, experimentation, and continuous learning
-

Apply

If you are passionate about decentralized technologies, full stack engineering, and building the next generation of digital experiences powered by blockchain, we'd love to connect with you.
