

Principal Software Engineer

Crypto Trading Infrastructure & Digital Asset Platforms

-  Remote / Hybrid / Onsite
-  Full-Time or Part-Time
-  The Copia Group, LLC
-  Principal Level

About The Copia Group

The Copia Group is an investment management firm supporting innovative companies across digital assets, blockchain infrastructure, fintech, trading technology, and emerging financial ecosystems.

Through our portfolio and strategic partnerships, we help support the development of institutional-grade crypto trading platforms, digital asset infrastructure, market connectivity solutions, and next-generation financial technologies used by traders, investors, and businesses worldwide.

We are seeking an exceptional Principal Software Engineer to provide technical leadership across mission-critical trading systems and help shape the long-term technology vision of our digital asset platforms.

The Opportunity

As a Principal Software Engineer, you will serve as one of the organization's most senior technical leaders, driving architecture, scalability, performance, and innovation across our crypto trading ecosystem.

You will partner closely with engineering leadership, quantitative teams, product stakeholders, infrastructure engineers, and business leaders to solve complex technical challenges involving trading execution, market connectivity, real-time data processing, risk management, and platform scalability.

This role is ideal for an experienced engineer who enjoys hands-on technical leadership while building highly performant systems that operate in fast-moving digital asset markets.

What You'll Do

Technical Leadership

- Define and drive long-term technical strategy across crypto trading products and platform services
- Lead architecture design for highly scalable, secure, and low-latency trading systems
- Establish engineering standards, best practices, and technical governance
- Influence key technology decisions related to market infrastructure, execution systems, and digital asset platforms
- Serve as a trusted technical advisor to engineering leadership and executive stakeholders

Trading Platform Architecture

- Design and evolve distributed trading systems supporting high-volume market activity
- Build low-latency services for order routing, execution, and market data processing
- Drive platform modernization and cloud-native infrastructure initiatives
- Improve reliability, scalability, observability, and operational efficiency across trading systems
- Lead architectural reviews for mission-critical trading and risk management platforms
- Evaluate emerging blockchain, digital asset, and trading technologies for strategic adoption

Engineering Excellence

- Mentor senior engineers, staff engineers, and technical leaders
- Foster a culture of innovation, ownership, and operational excellence
- Champion software quality, testing, monitoring, and system resiliency
- Guide teams through complex architectural decisions and technical trade-offs
- Promote sustainable engineering practices across the organization

Cross-Functional Collaboration

- Partner with Product, Quantitative Research, Trading Operations, Infrastructure, Security, and Executive Leadership teams
 - Translate business and trading requirements into scalable technical solutions
 - Align engineering strategy with company growth initiatives and platform expansion goals
 - Communicate complex technical concepts effectively to both technical and non-technical stakeholders
-

What We're Looking For

Required Qualifications

- 10+ years of professional software engineering experience
- Proven experience leading architecture and technical strategy for large-scale software systems
- Deep expertise in distributed systems, real-time data processing, and cloud-native architectures
- Strong experience with one or more modern programming languages such as:
 - Java
 - Python
 - Go
 - TypeScript
 - C#
- Strong understanding of:
 - distributed systems
 - event-driven architectures
 - low-latency systems
 - API design and integration
 - cloud infrastructure
 - database architecture

- security best practices
 - performance optimization
 - reliability engineering
 - Experience leading large cross-functional technical initiatives
 - Exceptional communication, leadership, and stakeholder management skills
-

Preferred Qualifications

- Experience building cryptocurrency exchanges, trading platforms, brokerages, or institutional trading infrastructure
 - Experience supporting high-volume, low-latency transactional systems
 - Understanding of digital asset markets, exchange connectivity, and market microstructure
 - Familiarity with blockchain networks, wallet infrastructure, custody systems, and on-chain transaction workflows
 - Experience with algorithmic trading, execution systems, or quantitative platforms
 - Experience with AWS, Kubernetes, Terraform, and cloud-native infrastructure
 - Experience scaling engineering organizations and mentoring senior technical talent
 - Experience influencing engineering strategy at an organizational level
-

Technology Environment

Trading & Platform Systems

Java • Python • Go • TypeScript • .NET

Cloud & Infrastructure

AWS • Kubernetes • Docker • Terraform

Data & Streaming

PostgreSQL • Redis • Kafka • Event-Driven Systems

Blockchain & Digital Assets

Digital Asset Integrations • Wallet Infrastructure • Exchange APIs • Blockchain Data Services

Engineering & Operations

GitHub • CI/CD • Observability Platforms • Infrastructure Automation

Why Join Us

- ✨ Flexible remote, hybrid, and onsite work options
 - ✨ Full-time and part-time opportunities
 - ✨ Competitive compensation package
 - ✨ Opportunity to shape next-generation crypto trading infrastructure
 - ✨ Organization-wide technical leadership influence
 - ✨ Exposure to digital asset innovation and global trading markets
 - ✨ Collaborative culture focused on engineering excellence
 - ✨ Long-term career growth and executive-level technical impact
-

Apply

If you are passionate about building high-performance trading systems, solving complex distributed systems challenges, and shaping the future of digital asset infrastructure, we'd love to connect with you.
